

ChipTorque PERFORMANCE

Ezy-FLASH delivers the latest in performance programming. It contains programs which have been customised by our experienced programmers to suit the Mitsubishi Lancer EVO VIII - IX. Programs for other makes and models are being developed. Specific modifications are made to the fuel, ignition timing, variable cam timing, boost, rev limit and more. These changes are set up to maximise your vehicle's performance potential. Changing between programs takes just a few minutes. The Ezy-FLASH can be custom tuned at any time to suit further modifications without the need to purchase another unit. Upgrades and datalogging software for the Ezy-FLASH will be available to download from our web site.

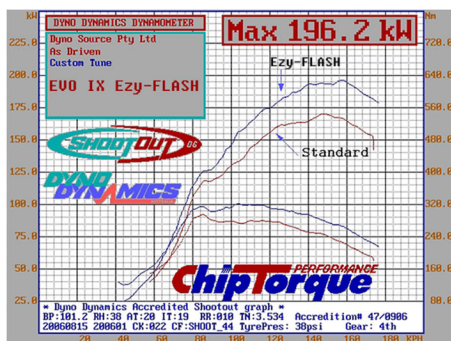

The Ezy-FLASH has three separate ChipTorque programs developed for the EVO:

- Valet Program - (low rev limit)
- 15 psi Performance Program
- 20 psi Performance Program

The ChipTorque program provide increases of 20 to 25 kilowatts at the wheels running the 20 psi Ezy-FLASH Performance Program. Improvements in driveability, throttle response, torque and fuel economy are also achieved, unleashing the full potential of your vehicle.

The programs are flashed into the factory ECU through the OBDII connector and allows the flexibility to reflash your vehicle as many times as you wish with one of the preset performance programs created by ChipTorque. The great thing about this upgrade is that your vehicle's factory program is stored in the Ezy-FLASH and can be flashed back into the ECU at any time.

Thinking of trading up to a newer model or make supported by Ezy-FLASH? This clever device can be unlocked from your current car and reloaded with programs for your new car.

- Ezy-FLASH is capable of storing up to 16 preset ROM versions. Each version can store entirely different tunes for added flexibility.
- OBDII DTC (Error Codes) can be read and cleared.
- OBDII data can be logged internally. Up to 10Mb log storage available.
- Firmware updates will be available over the internet.
- Existing hardware can support Mitsubishi EVO VIII - IX, Subaru WRX / STi / Liberty GT / B4 / Forester. Enquire about other makes.

The Ezy-FLASH for the Mitsubishi Lancer EVO VIII - IX costs \$995.00 and includes the Ezy-FLASH unit, OBDII cable, USB cable, set up disk, detailed instructions and warranty card.
